

VETSENS

HELPING TO MAINTAIN THE RHYTHM OF LIFE

2011 June Newsletter

Greetings. We hope you find this newsletter from Vetsens interesting.

EASYBEAT

The Easybeat veterinary monitor is going strong ten years after the last production run. The Easybeat is the only multi-parameter veterinary monitor designed and made in Australia. The Spare parts list is now available on the website and includes prices.

Easybeat replacement batteries are now in stock, and a service is recommended at least once every three years to replace the batteries and do a full system health check. The price for an Easybeat service has been reduced to \$250, which includes the battery pack and parts (except accessories). If your Easybeat was serviced over three years ago, or does not have a rear label saying Vetsens.com, we recommend a service to ensure reliable operation for the next three years.

A recent addition is the temperature calibrator, which is an essential tool for checking and calibrating the temperature function on the Easybeat. Over the next few months, plans are underway to upgrade the Easybeat manual to include temperature calibration and more information and make it accessible on line.

PULSE OXIMETERS

The Vetsens range of pulse oximeters is running off the shelves fast. The VETSENS-P02 is a best-selling pulse oximeter with over fifty sold this year. New accessories include a rubber cover, a metal tilt stand with rubber suction cup and feet and a recharger to reduce long-term battery cost.

The VETSENS-P02 has the following features:

- Visible OLED colour display
- Very accurate SpO2 and BPM readings
- Small size
- Powered by 2 x AA batteries with low power
- Supplied with remote program & USB cable
- One year full warranty – no questions asked
- Available replacement probes at half the cost

Price detail may be found on the next page.

COMPATIBLE PULSE OXIMETER PROBES

Vetsens has sourced a new supplier for replacement Easybeat (Nellcor) Oximax probes. Also available are compatible pulse oximeter probes for most brand name pulse oximeters.
