

VETSENS

HELPING TO MAINTAIN THE RHYTHM OF LIFE

2012 December Newsletter (Edition 3)

VETSENS-P02 probe

With the Vetsens probe, there have been a few cable failures caused by tension at the end of the yellow connector. This is caused by the long term flexing of the cable or accidental strong tugs when the cable gets caught. While this is consistent with normal oximeter pulse oximeter use, any failure needs investigating. We noticed that in the original picture of the pulse oximeter (see the next page), the connector had a blue rubber stress relief. The American connector manufacturer has now supplied some new rubber stress reliefs which we will now add to all repairs and new VETSENS-P02 pulse oximeters to improve reliability.

VETSENS-P02 KIT

Due to a number of inquiries, we have decided to assemble a new kit called the **VETSENS-P02** kit. This kit has everything in the **VETSENS-ROAM** kit and also a **spare** probe. One probe will be supplied with the long probe clip while the spare probe will have the short probe clip. Having a spare probe means the **VETSENS-P02** pulse oximeter will work for many years without needing repair.

EASYBEAT Straight Breath Sense Adaptor

When the Easybeat was first released, breath sense adaptors were not commonly available so

a purple breath sense adaptor was designed by EasyVet and made in Australia. Since then some unauthorised blue breathing tube connectors have appeared on the market from an unknown supplier. The purple (and blue) adaptors have a tendency to splinter and crack after a short period. As an upgrade, Vetsens has been supplying industry-standard quality transparent right angle adaptors. A recent request for a straight connector has added a new straight breath sense adaptor (*Order DB10-4941*).

Medical Equipment

Every now and then, Vetsens finds opportunities to pick up used medical equipment which can prove very useful to Vet surgeries. At present, these items are listed on Ebay under vetsens.com/ebay.html:

- Storz cold light fountain
- Stryker Hummer 2 Microdebrider
- BFW Maxenon 2xheadlamps + video i/face
- Arthocare Atlas diathermy

Most items are missing some or all of the accessories, but are in reasonable to good condition. Also, a new lot is arriving soon with some NIBP/Spo2 units on stands, O2 pin-index regulators, O2 flow meters, Medical Air flow meters and Medical Air outlet T-connectors.
